

ELEC340/440 –Final Year Project

Final report

Module	ELEC340/ELEC440
Coursework name	Final Report
Component Weight	33% = 16.5 Credits
Semester	2
HE Level	6 (ELEC340) 7 (ELEC44)0
Lab location	N/A
Work	Individually
Timetabled time	N/A
Suggested Private Study time	100 h
Assessment method	Individual report
Submission Format	On line submission - Canvas
Late Submission	This assignment falls under Additional Considerations Extension Policy
Resit Opportunity	By arrangement
Marking Policy	Numerical mark from Assessor and Supervisor
Anonymous marking	No
Feedback	e-project database and Canvas
Subject of relevance	Depending on project
AHEP Learning Outcomes	LO1 - Science, mathematics and engineering principles LO2 - Problem analysis LO3 - Analytical tools and techniques LO4 - Technical Literature LO5 - Design LO6 - Integrated/systems approach LO7 - Sustainability LO8 - Ethics LO9 - Risk LO12 - Practical and workshop skills

	LO13 - Materials, equipment, technologies and processes LO14 - Quality management LO15 - Engineering and project management LO17 - Communication LO18 - Lifelong learning
--	---

Final report

applies only to MEng program

	Knowledge and understanding	Completion of aims	Research achievements	Intellectual and technical skills	Exposition and structure of the thesis
Supervisor	25%	25%	20%	30%	N/A
Assessor	30%	N/A	N/A	30%	40%
90-100% 'Outstanding'	Total coverage of the project aims, objectives and task set. An exceptional demonstration of knowledge and understanding, appropriately grounded in theory and relevant literature. Outstanding research and academic content. Potential for a publication or a conference paper presentation. ## Able to provide a justification of the work in a wider social and environmental context.	All objectives achieved and fully evaluated. Extremely creative and imaginative approach. Detailed overview of potential applications clearly demonstrating original conceptual thinking and engineering insight. Detailed, well-documented implementation of all features Clear Overview of industrial applications and regulatory issues. Knowledge and Understanding	Outstanding amount of original, independent, novel work presented. Work is undertaken and documented to industry-standard quality. At this level, work should produce novel, publishable or industry-standard commercial quality work. Clear reflection on learning during the project and relating lifelong learning and further career development ## High awareness of industrial standards regulatory	An extremely clear well-formulated report demonstrating an advanced understanding of the subject matter and relating context. A creative, novel solution to demonstrated to publishable or industry standard. Critical analysis of data and considering alternative explanations for the results. Excellent use of statistical methods to evaluate performance.	Extremely clear exposition. Excellently logical structure. Excellent presentation, only the most insignificant errors. Scientific dissemination. Contains all necessary chapters and appendices, Excellent set of up-to-date references mostly from primary literature with the correct use of IEEE format. Graphs and tables well-presented and labelled. 3rd party image correctly referenced. Very good use of English

		## Able to fully articulate the business context for the project and have a clear vision for commercial exploitation.	requirements and how they affect the project.	Very clear test hypothesis and validation of results. Demonstration of high-level problem-solving through analysis of results. Use of unforeseen results to gain a deeper understanding Excellent use of resources to design, build and test the project. Excellent ability to convey context to the audience. An excellent reflection on learning and career Impact Publishable work ## Excellent analysis of industrial applications and/or academic novelty.	## Able to express a clear output that can be commercially exploitable and articulate arguments to support claims.
80-89% 'Excellent'	Excellent coverage of the project aims, objectives and task set. An excellent	Objectives achieved and fully evaluated. Creative and	Excellent amount of original, independent work was presented.	A clear well-formulated report demonstrating an advanced	clear exposition. Excellently logical structure. Excellent presentation, only

	demonstration of knowledge and understanding, appropriately grounded in theory and relevant literature. Outstanding research and academic content. Potential to contribute to a publication or a conference paper presentation. ## Able to provide a justification of the work in a wider social and environmental context.	imaginative approach. Overview of potential applications Clearly demonstrating original conceptual thinking and engineering insight. Detailed, well-documented implementation of features Good Overview of industrial applications and regulatory issues. Knowledge and Understanding ## Able to fully articulate the business context for the project and have a clear vision for commercial exploitation.	Work is undertaken and documented to industry-standard quality. At this level, work could contribute novel, publishable or industry-standard commercial quality work. Clear reflection on learning during the project and relating lifelong learning and further career development ## good awareness of industrial standards regulatory requirements and how they affect the project.	understanding of the subject matter and relating context. A creative solution to demonstrated Word could contribute to publishable or industry standard. Critical analysis of data and considering alternative explanations for the results. Very clear test validation of results. Demonstration of good problem-solving through analysis of results. Excellent use of resources to design, build and test the project. Excellent ability to convey context to the audience. An excellent reflection on learning and career Impact	minor errors. . Contains all necessary chapters and appendices, Excellent set of up-to-date references with the correct use of IEEE format. Graphs and tables well-presented and labelled. 3rd party image correctly referenced. Very good use of English ## Can articulate some of the outputs which can be exploitable but not able to fully supply supporting arguments.
--	--	---	---	--	---

				## Excellent analysis of industrial applications and/or academic novelty.	
70-79% 'Very Good'	Full coverage of the task set. A very good demonstration of knowledge and understanding but with some modest gaps. ## Reference to social and environmental context for the project, but these are not fully supported by arguments and/or evidence.	Overall aims are achieved so at times with a degree of simplification , creative and imaginative features. Very good and documentation Very good professional working practice. ## Indication of some business context but not developed.	A significant amount of original work was presented. Work is undertaken and documented to a high standard. Demonstration of independent working, with the supervisor mostly advising on project planning. Some reflection on learning during the project and relating lifelong learning and further career development ## Awareness of industry standards and regulatory requirements.	A well-formulated report demonstrating a substantial understanding of the subject matter and context. A creative, solution demonstrated to a high standard. Critical analysis of data results. Clear hypothesis and validation of results. understanding Very good use of resources to design, build and test the project. A good reflection on learning and career Impact ## Very good analysis of industrial	Very clear exposition. Satisfactory structure. Very good presentation, largely free of grammatical and other errors. All compulsory sections present references in the correct format. Good use of English ## Indication of the existence of exploitable aspects but no arguments presented to support the claim.

				applications and/or academic novelty.	
60-69% 'Comprehensive'	Good coverage of the task set. A good demonstration of knowledge and understanding but with some small gaps.	Overall aims are mostly achieved, but with details not fully implemented, conclusions contain some minor weaknesses. Applications presented without analysis. Good working practice close to professional standards	A good amount of original work was presented. Work is undertaken and documented to a good standard. Demonstration of independent working with supervisor steering project planning. some reflection on learning during the project and relating lifelong learning	A well-formulated report demonstrating a good understanding of the subject matter and context. A creative, solution demonstrated to a high standard. Critical analysis of data results. understanding Comprehensive use of resources to design, build and test the project. A good reflection on learning and career Impact	Good exposition. Satisfactory structure but with some weaknesses in exposition and/or structure, a few more grammatical and other errors. A reasonable set of references, not all citations in IEEE format. Good use of English
50-59% 'Competent'	Covers most of the task set. Patchy knowledge and understanding with a limited grounding in literature.	Only some aims achieved. Rather limited creative and imaginative features. A good amount of work but a patchy analysis of problems containing flaws.	A reasonable amount of work is presented. The work package is closely coordinated by the supervisor. Some use of third-party preassembled components or software libraries to	A competent report focusing closely on the project but weaknesses in conveying advanced contextual aspects. Data analysis and validation more shallow than 'comprehensive'	Competent exposition and structure. Competent presentation but some significant grammatical and other errors. A brief set of references some

			achieve parts of the project. Some reflection on learning during the project.	Aspects of the project are poorly integrated and may not fully work together. More basic reflection on learning and career Impact	web and secondary literature references, minor errors in labelling graphs and figures. English with minor errors
ELEC340 40-49% 'Adequate' For ELEC440 (MEng) this category is a 'Fail'	An adequate but patchy coverage of the task set and more weaknesses and/or omissions in knowledge and understanding. Just meets the threshold level. ## For ELEC440 (MEng) this category is a 'Fail'	An adequate amount of work but without much imagination. Incomplete aims. Shows barely adequate ability to analyse the problem project plan has flaws or has insufficient details. ## For ELEC440 (MEng) this category is a 'Fail'	A small amount of work was presented, mostly working to instructions of the supervisor or by trial and error rather than of planned work. Several aspects of the projects use third-party preassembled components or software libraries. Basic reflection on learning during the project ## For ELEC440 (MEng) this category is a 'Fail'	An adequate report focusing closely on the project but with substantial weaknesses Weak analysis and validation of the project. Project is poorly integrated and not all aspects work together as one product. ## For ELEC440 (MEng) this category is a 'Fail'	As 'Competent' but with more weaknesses in exposition, structure, presentation and/or errors. Just meets the threshold level. English with minor errors. ## For ELEC440 (MEng) this category is a 'Fail'

30-39% 'Fail'	Some parts of the set task are likely to have been omitted. Major gaps in knowledge and understanding. Some significant confusion. Very limited grounding. Falls just short of the threshold level.	No creative or imaginative features. Analysis and conclusions are rather limited. Falls just short of the threshold level.	Little work is presented. Only some aspects of the project have been undertaken to a satisfactory standard. Significant use of third-party preassembled components or software libraries across most aspects of the projects.	An unclear report focusing mainly on getting a few 'woking' aspects of the project. Design is not analysis-driven and there is little or no validation and testing. Project is a collection of features with no or very limited integration.	Somewhat confused and limited exposition. Confused structure. Some weaknesses in presentation and some serious grammatical and other errors. Falls just short of the threshold level. Poor use of English
20-29% 'Deficient'	As 'Fail' but with more serious weaknesses in presentation and/or grammar. Falls substantially below the threshold level.	As 'Fail' but analysis and/or conclusions may have been omitted. Project plan insufficient. Falls substantially below the threshold level.	Little work is presented. Most parts use third party preassembled components or software libraries.	As 'Fail' but with more serious weaknesses and no integration.	As 'Fail' but with more serious weaknesses in presentation and/or grammar. Falls substantially below the threshold level.
0-20% 'Extremely weak'	Largely confusing exposition and structure. Many serious grammatical and other errors.	No creative or imaginative features. Analysis extremely weak or omitted. Project plan.	No significant own work has been presented.	A confusing report showing no real analysis or engineering skills.	Largely confusing exposition and structure. Many serious grammatical and other errors.
